

Dear Explorer,

AusGeos is pleased to announce a brand new seismic processing service available immediately:

- Seismic processing and re-processing
- 3D and 2D
- Attractive prices
- Fast turnarounds
- Short waiting times
- Market-leading Globe Claritas processing software
- Latest algorithms
- 5-D interpolator
- and..

Unique in the business, we always provide a second* interpretation volume.

**In addition to a standard Kirchhoff PSTM result, all clients will receive a second, fully-processed PSTM result using Equivalent Offset Migration (EOM) technology.*

The two **Kirchhoff** and **EOM** volumes often highlight different aspects of geology. They can be interpreted separately or BLENDED to provide a single high-resolution interpretation volume.

SPECIAL OFFER. For a limited time, every seismic processing order placed between 15th May and 21st August 2013, the EOM volume is provided at no extra cost.

AusGeos specialise in high quality processing, shallow, crooked line, and geology driven processing.

Call if you need azimuthal processing, real-time (In-the-Field) processing (for rapid results), merging of 3Ds, or have any other specific needs. We also process Fairfield ZNodal data and provide exploration support from **Permit Entry** to **Field Development** for all our clients.

If any of our services might help you improve your business, please call:
Martin +61 (0)423 153 122 (e-mail martin@ausgeos.com.au) or
Peter +61 (0)438 820 043 (e-mail peter@ausgeos.com.au).

All AusGeos jobs are supported by an Australian-based processing team, and a large, experienced, interpretation consulting team.
